SunCare Spa Applications

It is the right address for all kinds of Spa applications that come to your mind from sauna to steam room, from hamam to swimming pool, from salt room to mud bath, from adventure shower units to jacuzzis, from compact systems to heated stone beds....

Whether professional institutional solutions, or home type mini units...

SunCare, which had been established in 2005 in Ankara, completed SPA projects of hundreds of homes and institutional social facilities both inside the country and abroad.

SunCare Spa applications, has become one of the pioneering SPA Implementation companies of our country with its professional staff and over 1500 m2 wood and marble manufacture area.

Master hands of SunCare is at your service for professional solutions in SPA applications.

CLASSICAL SAUNA

“ “

WE TURN CAREFULLY SELECTED
TIMBERS INTO SAUNES
WITH RIGHT METHODS...

” ”

You are exactly at the right place if you intend to build sauna to your home, workplace, construction or sports center. With the accumulation of experience of long years and our hundreds of implementations and institutional structure, our aim is to manufacture qualified saunas with correct methods.

QUALIFIED SAUNA MANUFACTURE

Sauna... The most natural and warmest space that timber presents you...

In these spaces in where you leave the stress of daily life physically and mentally behind, each component has to be carefully selected at every stage of manufacture... Our aim, with institutional structure of 10 years, is to manufacture for you qualified saunas with correct methods. All kinds of materials are carefully chosen from infrastructure to isolation, from timbers to sauna stove in SunCare.

Generally, we can classify saunas as small, medium and large.

Saunas, with up to 6 m² floor base are considered small saunas. Up to 10 m² are considered medium, and more than 10m² are considered large saunas.

One of the most important issues of attention is the height of the ceiling. In case the seating group is composed of two layers, the height of the ceiling should be 210 cm, and is composed of three layers, then the height of the ceiling should be 240 cm. In case the height of the ceiling is constructed above these numbers, then the temperature in the sitting lounge of your sauna will drop and the amount of sweating will decrease. Electricity consumption increases.

In all its sauna manufactures, SunCare acts in accordance with the instructions of International Sauna Society.

WHAT DOES A QUALIFIED SAUNA MANUFACTURE INVOLVE?

Infrastructure

A qualified sauna manufacture starts with a correct infrastructure and heat isolation. SunCare constructs the main carrier structure with pine/spruce woods each have thickness of 2.5 and 4 and 10 cm. We provide the high level of isolation of the place with condensed and heat isolation value increased stone/glass wool.

Timber Structure

The main components in saunas that can be seen and contact the skins, are timbers. The sauna is paneled with timbers made of chosen wood. For visual integrity and solid structure, we use mono-bloc/full size panels from floor to ceiling. Panels used in sauna manufacturing, are being oven dried to be resistant to changes in temperature. In absence of private request, the project includes 210-240 cm height of ceiling.

Benches & Mats

Timbers to be used at benches and mats have special importance. Avascular, no resinous and non heat retaining timbers have be used. Thus, Abachi is the most appropriate timber. Timbers with vascular, retain heat or have possibility of flow of resin may not be used in any conditions. Lounge suites may be designed as single, double or triple layers according to the sizes of saunas. Benches and mats are manufactured to allow easy movement for cleaning purposes.

Sports School, Çankaya

Sauna Door

Sauna doors are manufactured in 77*197 cm with 8 mm of thickness of monolith tempered glass. Smoke, bronze, blue, green and natural colors are used. In order to increase heat isolation, silicon sealing has been applied at sauna doors. At the doors, special designed SunCare door handle and magnetic closing system is used. Since magnet is located at exterior surface, it is not subject to oxidation and corrosion.

Natural Air Circulation

As ventilating system, between inner and outer spaces of sauna, close to the heating stove, a ventilating duct has been composed with the diameter of at least 8 cm. The cold and fresh air that enters into sauna is heated by passing through heating stoves. It is discharged through discharge channel at the upper part after circulated inside the sauna. Thus, hot air in the sauna always stays clean.

Safety

For your safety, electricity is being passed through non combustibile silicon cables and installation pipes.

Comfort

When panels are delivered from manufacture, there are traces of knives, notches and shivers on their surface. SunCare makes special contact corundum application to all timbers to be used in sauna which is specially called caliber. With this opportunity, you contact with wood surface soft as velvet in all walls and lounge suites.

Sauna Stoves

The most appropriate heating stove is chosen in line with the dimensions and purpose of use of your sauna. Choosing the most appropriate heating stove for dimensions and purpose of use, will present you the less electricity consuming sauna. SunCare is the first company in our country to manufacture CE certificated domestic heating stove. It uses its own heating stove in all saunas. Upon special requests, it uses international brands such as , Harvia, Helo, Tylo.

Longevity

The most damaged wooden part subject to over heating in saunas is the part front cover of heating stove. The wooden part behind the stove is exposed to very fast deformation. In order to overcome this situation, SunCare, in all its saunas, covers the part behind the heating stove with natural blast stones. Thus, longevity of your sauna increases.

Sauna Accessories and Supplementary Products

For all saunas that it manufactures, according to its purpose and capacity, SunCare delivers adequate numbers of supplementary products such as sand glass, wooden head supports, thermometer-hygrometer, copper and wood buckets and scoop sets, essences, aroma therapy censers.

SAUNA TIMBERS

Mediterranean Pine

It has marbled and red look. That is why it is also named as red pine. It has a unique odor. Its manufacture cost is relatively low since it is easy to purchase. But its resin amount is high. Even it is used for the walls, it can not be used in benches. In case it is used, it may drain resin. The most important of all, it retents heat and burns you when you sit or lie down.

Siberian Pine

Siberian Pine is one of the woods with lowest amount of knots and resins. With its plain marbled structure and color, it has a unique, plain and nice look. It is the most preferred timber in sauna manufacture cause of these characteristics. It can not be used in benches like red pine.

Abachi (Ayous)

It is an African originated wood. This timber has knot-free, non resinous and smooth-textured. It has a soft surface. The most important characteristics is its excellent heat insulation properties. It is the most commonly used wood in sauna paneling. In sauna, at the points where the skin directly contacts with, this wood has been used. Only ayous wood should be used in benches and mats as well as headrests and stove guards.

In order to obtain visual integrity, abachi panels may be used in wall and ceiling paneling.

Mediterranean Cedar

Mediterranean Cedar wood is a wood with a unique aromatic odour which is famous of its durability. It has resin and multi knobs. It is generally preferred for its odor rather than its look. Its logging is limited in recent years. Thus, it is rarely found. Generally it is not found in one piece, pieces dovetailed and turned into panels. In special implementations, it is generally preferred at hidden places under the benches only for its odor.

Aspen

It is a soft wood suitable for processing. It is knot-free, non resinous without vascular. It is a plain material with extraordinary beautiful look. Since it is rarely found, its cost is high. It is generally recommended for private sauna manufacturing due to its very light color.

Canadian Red Cedar

It is also known as Western Red Cedar. It is the lightest sauna timber with the highest heat isolation capacity. Its resistance is also high. It is knot-free and non resinous. It is the sauna timber with the best smell. It is the timber of special projects and special saunas due to its attractive smell.

PORTABLE CABIN SAUNAS

You do not have a special room for sauna, you want to construct a sauna at the part of a large space. If you say "It is important for us to be transportable in case of need...", we recommend you our portable cabin saunas.

- ☺ It is installed within a short period of time.
- ☺ It can be transported in case of need.
- ☺ It can be manufactured in all sizes and dimensions.

OUTER SPACE SAUNAS

We also have solutions for those who say “We want our sauna in our garden”.

SPECIAL
DESIGN

SAUNA HEATING STOVES

Sauna stoves, or in other words sauna heaters is the second most important part of sauna following timber structure. A correctly manufactured sauna can only operate efficiently with correctly chosen heater. The volume of your sauna should be considered while choosing your heating stove. With this opportunity, your sauna will get warmer in short period of time as well as consuming less electricity.

As a result of long lasting research and development efforts, SunCare has been producing the first CE certificated sauna heating stoves in Turkey. To ensure longevity, our heating stoves has been manufactured of inner-outer stainless steel material. It is used with easy to use and esthetic control panel with key lock. Control panel works with 12 V of low voltage to ensure safety.

We can separate heating stoves like saunas into three.

Small sauna heating stoves

Small sauna heating stoves are used for spaces up to 6 m². It is for home type or boutique small saunas. Their powers are 3, 4.5, 6, 8 and 9 kW/hour. Generally they have control on the body. As optional, they can be operated with remote control panel. 1 package of (20 kg) sauna stone is adequate.

Middle sized sauna heating stoves

Middle sized sauna heating stoves are more appropriate for social usage areas for 10-15 people. In other words, they are used in saunas with volume of 13-24m². Models have the power of 12 and 15 kW/hours. It is used with external control panel. It should be ordered with 1-4 package of sauna stones.

Large sized sauna heating stoves

Large sized sauna heating stoves are adequate for saunas with the volume larger than 24 m² with the capacity of more than 15 people. In the large sized saunas, according to the volume, 18, 21, 24 and 27 kW/hour powered heating stoves are used. In parallel with the size of the volume, more than one heating stoves may be used. Large sized sauna heating stoves are used with external control panel and special power box. If you want to order for one of these stoves, you must also order 6-8 package of sauna stones.

SAUNA ACCESSORIES

All products and accessories to facilitate the usage of your sauna and to give you more pleasure is at SunCare.

- ☺ Sand Glass
- ☺ Thermometer-Hygrometer
- ☺ Wood bucket scoop set
- ☺ Copper bucket scoop set
- ☺ Wooden head support
- ☺ Sauna Aplique
- ☺ Aromatherapy censer
- ☺ Sauna heating stove stone
- ☺ Culvert set
- ☺ Emergency Alert Systems

“ “ SMALL TOUCHES... PERSISTENT SAUNAS... ” ”

COLOUR THERAPY

Among SPA therapies, colour therapy get benefit from the effects of colours on people. Colour therapy had been firstly implemented by Ibn-i Sina.

Red: It speeds up blood pressure and breathing. Strengthens concentration. Facilitates taking decisions faster. It is appetizing. Makes you to forget time.

White: Gives the feeling of cleanness, health and purity. Symbolizes stability and sustainability.

Yellow: Has effects on digestive system. It prevents indigestion and constipation by providing intestinal motility. Therapists use colour yellow for depression.

Green: It is a tranquillizer colour. It helps your body to throw out toxins. Lowers blood pressure and prevents high pressure. It is good for chest diseases such as chronic bronchitis and asthma. Increases visual capacity.

Blue: Relaxes nerve system. Balances body energy. It is effective on high pressure and hypertension. The most important characteristics is to help someone loose appetite.

Indigo Blue: It facilitates creativity as well as it takes away the feeling of tiredness.

Violet: Gives the feeling of calmness and comfort. It is used in headache and all aches in the body and nerve system disorders.

Akropol Thermal, Beypazari

SHOCK SHOWER BUCKET

Let your sauna has a story to tell... Let your guests live an extraordinary experience after warm and relaxing sauna pleasure. After sauna, for the effect of shock shower, 15 litter of cold water from head to foot.

Wooden shock shower bucket has automatic water gage system. After each use, the bucket is refilled. Water capacity is 15 litters. The height should be used 240 cm for use.

AROMATIC TIMBER APPLICATION

Do you want your sauna to release aromatic essences all the time? Your sauna will release a light and nice smell of forest by applying special timbers under the benches such as Mediterranean cedar or Canadian cedar.

SAUNA ESSENCES

From menthol to ocaliptus, from orange to mango...

The widest range of sauna essences are in SunCare...

Essences help to balance the humidity while turn your sauna into a more comfortable environment with their nice smells.

How are sauna essences used?

- Put one lid of essence for 1 litter of water in your sauna bucket.
- On 40-45 minutes heated sauna stones, apply with duration of 15-20 minutes by using small amounts.
- You will immediately notice the change of air in your sauna.
- Since our essences are highly concentrated, they should not be directly applied on stones.

Our Sauna Essences

Ocaliptus	Menthol	Orange Cinemon	Lavender
Lemon	Spruce	Orange vanilla	Green apple
Pine	Rose-Plum	Tropical	Mango

AROMATHERAPY PRODUCTS

Aromatherapy censers

This product, which is used by hanging on the wall, is specially manufactured for social facilities. It avoids users to use much sauna essence by using bucket and scoop. Thus stable and continuous smell of essence is provided inside the sauna. It decreases the use of essence. At the same time since less water will be dropped on heating stove, it increases the longevity of sauna resistance. It is completely hand made composed of copper. In manufacture process of the product, not any kind of dye, varnish or chemical materials are used.

Tylö Fresh Basic / CC

It is a professional type essence device designed for saunas. It is installed 2 meters away from the exterior of sauna and connected with its hose. It operates silently and automatically. It has a basic model and CC model with control unit. CC model unit controls both intensity of essence and intervals of essence.

SAUNA AND SALT THERAPY

Salt therapy among SPA therapies is used to clean the respiration system. Salt therapy is one of the treatment methods which has been used as important treatment sources for centuries. It is especially important in respiratory diseases. It gives great amount of release for asthma, sinusitis, KOAH patients. Again, related with respiratory system, it is a method that significantly contributes to the treatment of sleep disorders, sleep apnoea, waking up tired all deriving from not breathing properly. Salt therapy is a process that was initiated by Dr. Felix Boczkowski in 1843 after he had noticed that the workers in the salt mines of Wieliczka city of Poland had not faced with any respiratory diseases and examining the issue scientifically and reporting his findings. Following this event, inside this mine in Poland, the first salt therapy center in world had been opened. In the following years, similar therapy centres had been opened throughout the world in salt mines and caves.

How is salt therapy applied in sauna?

Inside the sauna, walls/panels are constructed composed of salt bricks obtained from salt of Himalayas. In the atmosphere of the sauna, with the effect of high temperature and humidity, micro particulars are released from the salt bricks. This causes the effect of salt room inside the sauna.

MAINTENANCE-REPAIR & RENEWAL SERVICES

Sauna Maintenance and Renewal Services

Just like pools, baths and steam rooms, saunas are also used without clothes. Thus, it has the capacity of being contaminated. Due to their structure, cleaning of pools, baths and steam rooms are simple and easy. You have chance to provide health information with both mechanical tools and various chemicals. But since saunas are made of wooden structure, it is not possible to wash or obtain cleaning by using various chemicals. Washing damages the structure of timber. Makes sauna impossible to use in short period of time. In case chemical cleaners are used, timbers absorb these chemicals and return them with heat.

Considering the fact that saunas are places where you are purified from toxins, their cleaning and maintenance are significantly important for the health of our customers.

We recommend you to undertake maintenance due to their frequency of use, once in 5-6 months and once in a year for private house saunas.

The maintenance of the saunas include sandpapering of ground, benches, all walls and ceiling with special machines, maintenance of damaged parts and if necessary, renewal of broken components. Heating stove, control panel and power box cable controls are made. Finally, dust cleaning is made and UV disinfection process is applied. Sauna is made ready to use after being renewed. Timbers turn to their original look. Inside the sauna, you notice the first day smell of the timbers.

Repair of Sauna heating stove & Control Unit

Sauna heating stoves operate long hours at intense heat. Especially in the heating stoves of which users put unconsciously so much water, resistances and other components may often cause defects. No matter what happens, SunCare brand is beside you in all defects of heating stove and its control units with its expert and experienced staff.

BIO SAUNA

Bio Saunas are developed as a modern alternative to classical Finnish saunas. For the ones who do not prefer high temperatures, it has lower temperature and higher amount of humidity. Temperature is between 50-60° C and humidity is between %50-60. In the heating stoves of bio saunas, there is a special heated water reservoir in order to provide high humidity. These heating stoves which are also known as Combi are again calculated due to total volume of sauna.

Like classical saunas, bio saunas also may be enriched with attachments such as aroma therapy and colour therapy.

BENEFITS OF SAUNA FOR YOUR HEALTH

Today, the benefits of regular sauna implementations to your mental and physical health, is a commonly accepted fact.

Getting into a warm sauna, relaxing the hardened muscles with two or three sessions of 15 minutes, getting away from the toxins in your body are easy to reach today...

In case we focus on the main benefits of sauna; we can say,

- Takes away stress.
- Relaxes your muscles, kills the pain.
- Burns calories, helps to lose weight.
- Accelerates blood circulation.
- Provides deep and comfortable sleep.
- Facilitates throwing out of toxins.
- Cleans dermal pores, brings young and fresh look to human body.
- Strengthen the immune system.
- Decreases winter chilling.

FAR-INFRARED SAUNA

SWEAT FOR YOUR HEALTH...

Far-Infrared is a special medical characteristics heating system with high medical effects. This technology, developed by NASA, is the primary choice those who consider sauna as a serious health unit both in terms of its technological and other several advantages. With its over 10 years of experience, SunCare is the biggest manufacturer in Turkey in for infrared saunas.

FAR-INFRARED
SAUNA

Central Bank villas, Keçjören

FAR-INFRARED SAUNA TECHNOLOGIES

This technology which has been commonly used throughout the world, is the invention of American Aviation and Space Association NASA and this invention was initially used by NASA. Technology, which has been developed in order to provide the appropriate heating of the astronauts in long term space missions, after being used in hospitals as heating device in baby incubators, was started to be used in living areas such as hotels, thermal facilities and beauty centres.

Since it is an advanced technological system, it is superior than systems with classical heating stoves both in terms of health effects and technical data. Since it has medical characteristics, its health effects are more in comparison with saunas with classical heating stoves. It provides more sweating in low temperatures like 50-60°C. There is no steam and humidity. Those who have asthma and respiratory diseases and thus can not use classical sauna, may use far-infrared sauna systems easily. It is a widely used system that takes place at the pages of health magazines. It consumes so little electricity. Electricity consumption is about 1/3 of saunas with classical heating stoves. Pre heating time is very short like 10-15 minutes.

Generally they are easy installable portable cabins with furniture equipped. There are no processes like project, manufacture. Since they are able to be installed at every spaces without manufacture process, they are generally preferred especially in houses, boutique sports-spa managements, suit/king size luxury rooms of hotels.

Upon request, they can easily be on-site manufactured at demanded sizes.

SunCare, is wellknown and the most preferred company in Turkey in terms of infrared saunas.

COMPARISON OF FAR-INFRARED SAUNA WITH CLASSICAL SAUNA

Tama.Ki Relaxation, Kozyatagi

Angora Houses, Beysukent

Superior Technical Specifications of Far-Infrared Sauna and a Simple Comparison...

In all of our portable sauna cabins, knot free and non resinous Canadian hemlock are used. For all models to become ready, 10 minutes of pre heating will be adequate. It is controlled with digital control panel. You will be heated with special structured carbon fiber far infrared heating panels. According to model, it involves lcd tv / cd player / media player; audio system, illumination and aroma therapy and ionizer. Window and door glasses are tempered.

It is designed in modular structure like the shape of furniture. Its installation takes only one hour. It does not require any additional equipment, construction, termination during installation. In case of need, it can be easily demounted and transported. All you need to operate is 220 V. Its electricity consumption is very low. It is bill friendly.

	Far-Infrared Sauna	Classical Saunas
Pre Heating Time	Short (10-15 minutes)	Long (35-40 minutes)
Temperature	40 - 65 °C	80 - 100 °C
Air Circulation	Sweating in chill, humidity-free and low temperature environment.	High temperature
Installation time	1 hour	1-2 day
Need of Space	Can be installed at small areas like 1 m ²	Requires larger spaces
Electricity consumption	1200 W - 2800 W / 220 V	4500 W - 9000 W / 380 V
Entertainment	Lcd tv, cd player, media player	-
Heat source	Safe and direct effect Far-Infrared heaters	Convictional heating from high heat from heater
Portability	Real portability with its modular structure	Mostly stable and not possible to transport

BENEFITS OF FAR-INFRARED SAUNAS FOR YOUR HEALTH

Dr.Mehmet Öz defines far-infrared saunas on which researches are published at prestigious health magazines, as “Technology to extend your life...”

You will be surprised when you read the benefits of far-infrared saunas for your health.

**It helps you to get purified from your toxins...
7 times more in comparison with classical saunas!**

In our age, almost all foods and drinks we consume involve additives. Many studies point out that such additives are composed of harmful chemicals. These harmful materials accumulate in our body in everyday and in time cause serious and visible negative effects.

Thanks to deep sweating derived by far-infrared sauna, it will be very easy to purify your body from such toxins. Beyond your imagination, you can detox 7 times more in comparison with classical saunas. Table below shows the amount of fat and toxins of an individual's 100 unit of sweat;

	The amount of water in sweat	The amounts of toxin and fat in sweat
Classical saunas	% 97	% 3
Far-infrared saunas	% 80	% 20

Provides fitness and weight control...

Body, which is deeply heated by far-infrared heating starts to burn fats faster. The fat layer in our body starts approximately 1 cm below the skin. In classical saunas the heat may diffuse 0,5 - 1 cm below the skin while in far-infrared, the heat diffuses 4 - 4,5 cm below the skin and may break up fat cells. Thus, you may burn 600-700 calories in one session. An average individual may lose 3-5 kg monthly in case of using far-infrared sauna regularly.

Far-infrared saunas may also be used supportive for curing obesity. You may examine the article published at Magazine of Trakya University Faculty of Medicine Magazine related with the subject.

Table below shows the amount of calories burned in half hour due to types of exercise.

Sports	Marathon race	Swimming	Running	Tennis	Cycling	Walking
The amount of calories burned	590	300	300	265	225	150

It makes your cardio vascular system work...

SunCare far-infrared saunas enlarge your blood veins with its deep heating. Thus, it facilitates clean blood to the far edges of your body easily. It is effective in hyper tension. It decreases cholesterol. It regulates your heartbeat and pulse. Half hour use of SunCare sauna helps your heart to work regularly like in a serious and scheduled sports activity due to your increasing blood circulation.

Gives your skin back its flexibility and gives you beauty.

Far infrared heat, facilitates to throw out fats, toxins, chemicals and other harmful materials that accumulate under your skin by sweating. Thus, enables several skin problems like acnes, cellulites, eczema and similar. Your skin regains its flexibility and softness.

Strengthens your immune system.

Far-infrared heating system stimulates white cells in the blood and makes them active. Since it facilitates regular operating of general body system, it strengthens your immune system. Decreases winter chilling, very effective in cold.

It kills pain.

It helps your body to produce natural pain killer of your body endorphin. Endorphin is a secretion that your body produces and which is thousand times stronger than morphine. Thus it kills many pains in muscle and bone systems and joints, it gives you relief. It is a system that fastly responses to calcification.

Makes you relief and relax.

SunCare far-infrared saunas are systems in which you feel can feel their positive effects on chronical fatigue, stres, depression and exhaust.

It is a real anti aging system

With all its characteristics mentioned above, it stimulates your organs and adenos. Re arranges your general body structure. It stimulates testosterone in men and oestrogen in women. It minimizes the negative effects on body and thus minimize effects of aging. Briefly SunCare far-infrared saunas are whole anti aging system in comparison with simple products which only have regional effects.

FAR INFRARED SAUNAS IN MEDICAL JOURNALS

Several medical researches have been undertaken on far infrared heating technology of which SunCare is the pioneering manufacturer in Turkey. Researchers who came up with impressive results, had published their findings at international medical articles.

1. It is guiding for young obese in IR sauna weight control and cardiovascular condition.
2. Regular far infrared sauna therapy is an effective method to correct endotel functions in patients with atherosclerosis.
3. Repeated far-infrared sauna use protects the body from oxidative stress and is advised as a method that hinders atherosclerosis.
4. Far-infrared sauna use corrects vascular endotel functions and facilitates the healing of cardiac functions and clinical symptoms.
5. According to results obtained from researches, regular far-infrared sauna use it may be a promising method for chronic fatigue syndrome.
6. Far-infrared sauna therapy may also be considered as a beneficial method for minor depression methods
7. Far-infrared heating may stimulate lactation in puepperant women and may be used in such period.
8. Regular far-infrared sauna is a beneficial implementation in patients with chronic heart diseases of rhytm disorders.
9. In patients of peripheric vascular diseases, regular far-infrared sauna use arranges clinical symptoms, arranges current blood circulation. This method may be used an an extraordinary and new method for patients with peripheric vascular diseases.
10. Infraredsaunatechniqueisaneffectivemethod at early stage of "Rheumatoidarthritis" and "Ankylosing spondylitis" patients without requiring pyhsical activity which decreases the fatigue and joint austerity.
11. In patients of Fibromyalgia, ihe decrease in pain has been observed even from the first session. Infrared sauna technology is an effective method in fibromyalgia syndrome.

FAR-INFRARED SAUNAS FOR YATCHS

SunCare does not only manufacture sauna on land but also on sea as well. We manufacture saunas in competence with Turkish Loyd codes by combining rights materials with right craftsmanship with its professional structure.

Those who want to manufacture saunas for their yachts and ships, may prefer infrared system saunas of SunCare Spa implementations operating with 220 V which are safer and approved by Turkish Loyd that provide 60 degrees more sweating, instead of saunas with sauna heating stoves that rise up to 110 degrees. For your safety, sauna control panel operates with 12 V low voltage.

Halas 71, Istinye

COLOUR THERAPY

Color Therapy among SPA therapies, the effects of colors on human are being used. Color therapy has been first determined and implemented by Ibn-i Sina.

Red: Speeds up blood pressure and respiration. Strengthens concentration. Helps taking quick decisions. It appetizes. Makes you forget time.

White: Gives the feeling of being clean, purity and health. Symbolizes stability and sustainability.

Yellow: It is effective on digestive system. It prevents indigestion and constipation by providing intestinal motility. Therapists use yellow colour for depression.

Green: It is a calming colour. It helps your body to throw out toxins. Lowers blood pressure and prevents high pressure. It is good for chest diseases such as chronic bronchitis and asthma. Increases visual capacity.

Blue: Relaxes nerve system. Balances body energy. It is effective on high pressure and hypertension. The most important characteristics is to help someone loose appetite.

Indigo Blue: It facilitates soothing as well as it takes away the feeling of tiredness.

Violet: Gives the feeling of calmness and comfort. It is used in headache and all aches in the body and nerve system disorders.

AROMATHERAPY

Magic of Essences

While using your infrared saunas, we recommend you to use aromatic oils. Aromatic oils of which increase its effects with heat, also increases the pleasure and satisfaction of sauna use.

Carry the healing effects of oils with aromatherapy's 6000 years of history.

Aromatherapy can be defined as using extracts of volatile and fragrant oils as supplementary treatment for certain diseases.

Lavender: It is used for headache and insect bites. It is essential for fear, sleeping disorders and depression.

Eucalyptus: Effective against virus. It is used for colds and respiratory problems.

Bergamot: It refreshes individuals and useful against stress.

Daisy: Arranges sleep, effective in muscle, bone and joint problems.

Rose: It is effective on allergies, migraine, circulation and menstruation problems.

Jasmine : It is beneficial for loss of sexual appetite and menstruation pain. Effective on dry and sensitive skins.

Lemon: Kills microbes. Effective in colds, oral wounds and sore throat.

E-01 ECO SAUNA

Special Carbon Fiber Heating System

In all SunCare far-infrared saunas models, special carbon fiber heating techniques.

With this system, heat is equally distributed to all sauna space and enables more comfortable sweating. This unique technology is in Turkey for the first time with SunCare after United States and Japan.

Digital Control Panel

Your sauna has digital control panel. With control panel you can regulate heat and time values of your device and also control illumination. With automatic thermostat the temperature in the cabin will be stable.

FM / MP3 Player

First in sauna pleasure...

SunCare gives you the opportunity to listen music during using sauna pleasure with USB, MP3 Player and FM radio specifications in ECO models.

M SERIAL SAUNAS

Special carbon fiber heating system

In all types of SunCare far-infrared sauna systems, special carbon fiber heating technology is used.

With this system, heat is distributed equally in the sauna space and provides you more comfortable sweating opportunity. This unique technology is for the first time in Turkey after United States and Japan!

Digital Control Panel

Your sauna has digital control panel. Via control panel, you may regulate temperature and time values and control illumination. With its automatic thermostat temperature will stay stable.

7" monitored Media Player

First in sauna pleasure...

SunCare presents you multimedia entertainment opportunity such as picture, music and video while using your sauna thanks to its 7" monitored, USB, SD & MMC input internal media player.

Aromatherapy

Put the natural aroma oils inside the aroma box and enjoy your sauna in beautiful therapy essences.

SPECIALLY DESIGNED FAR-INFRARED SAUNAS

In all over the world far-infrared sauna systems are manufactured as ready made cabins. But this is not the case for SunCare. In order to limit our customers in such borders, just like in classical saunas, far-infrared saunas are also manufactured at every requested size.

TRANSFORMATION FROM CLASSICAL SAUNA TO FAR-INFRARED SYSTEM

You already have a sauna. Classical sauna with heating stove...

You recently noticed the effects of far-infrared saunas.

If you want to get benefit from the advanced health effects of far-infrared heating technologies and want to introduce your customers with this technology, SunCare also presents you solution alternatives.

With SunCare, you can easily transform your existing sauna into a one with far-infrared technology.

STEAM ROOM

“

MASTER CRAFTSMANSHIP,
ENGINEERING POINT OF VIEW

”

We manufacture qualified steam rooms all composed of special materials both water and heat resistant from infrastructure to panelling materials, from ceiling to illumination, from generator to door.

STEAM ROOM

Level Up Fitness, Keçiören

STEAM ROOM MANUFACTURE

SunCare manufactures Steam room to all spaces you dream of and design. Main construction of the steam room may be composed of several materials such as glass mosaic, ceramic, acrylic or marble upon your request. Glass mosaic provides aesthetic and colourful look. It is one of the most appropriate materials for steam rooms. It is very adoptable to curves lines of steam rooms. It is durable.

In the steam rooms composed of glass mosaic, special steam room sitting groups with their aesthetic look and ergonomic structure are used. SunCare is the main manufacturer of these special steam room sitting groups.

Steam rooms may also be partially or totally composed of ceramic as well. Considering the price, it is relatively more appropriate in comparison with glass mosaic, but it is a weaker material in terms of visuality.

Acrylic is another material that may be preferred in manufacturing steam rooms. It is easy to clean. Has high level of durability. It is extremely hygienic with zero grout. Thus, there are several steam rooms of which only benches are made of acrylic. Portable steam cabins and steamed compact systems are manufactured only with acrylic materials.

Marble is the most enduring and most natural material to be used in steam room manufacture. Its cleaning is easy and hygiene values are high. In the intensely used areas marble is the most appropriate choice. But it should be kept in mind that marble is a cold material. Thus, in marble steam rooms, -at least in benches part- heating systems are used.

In the steam rooms, all kinds of details from benches to walls, from ceiling to illumination are important. Frequently broken steam generators, the doors that intake cold air, a ceiling that drops cold water due to condensation, losing its dye and getting unsound, continuously blowing lights, benches that collect water due to reverse flows....

Steam rooms that are not constructed properly would be the most problematic part in a large facility. SunCare steam rooms combine the most appropriate materials with correct techniques.

In steam room manufacture, we work considering and designing many aspects such as structure that may lead water that derive from condense of steam, IP standards of electricity products, technical volume where the steam generator will be located, steam line, a design to hinder the condensation on the ceiling.

PORTABLE STEAM CABINS & COMPACT SYSTEMS

STEAM GENERATORS

For sustainable and problem free steam room pleasure, SunCare uses high class of steam generators. Steam generator is determined in line with the volume of your space. Material of steam room, its isolation level, condition of ventilation are also issues should be taken into account while choosing the appropriate steam generator. Steam generators have two different types with resistance and electrode. Models with resistant type with higher steam levels are mostly preferred. Models with electrodes have the mechanism to deliver softer level of steam. It has longer longevity. But their capacity can not surpass a certain level.

As the result of long lasting research and development activities, SunCare manufactures the first CE certificated steam generators in Turkey. Our steam generators are composed of stainless steel with longevity. All models include full automatic discharge valves. It is used together with control panel which has flexible look and key lock. For visual integrity control panels of generators and heating stoves are manufactured the same. For the safety of users, control panels operate with low voltage of 12 Volt.

Another important aspect like steam generator is the steam pipe and steam exit caps. It is carried to steam room via steam pipes specially designed with curves in line with 100° C of steam. Special steam nozzles are used in order to distribute the steam inside the room avoiding the users to burn.

Since steam generators are not located and installed completely, they become candidates for the most frequently seen breakdowns. We plan several different aspects for the device to operate with maximum capacity, such as calcification preventive system, ensuring pipe and piping line composed of most appropriate material for steam to be transferred to steam room, adopting of appropriate essence units to system in order to use such essences. SunCare makes installation for all its products in competence with the requirements of current legislations. Gives necessary training about the use of products.

CALCIFICATION PREVENTION SOLUTIONS FOR STEAM GENERATORS

Steam generators are devices that transform the water inside the boiler into continuous steam with high electricity power. In order for device to operate productively, the network water provided at access at least 1 French toughness. But this condition can not be met in our country's water of networks. Because in our country, calcification values are 15 or even 20 times of required values.

Let us summarize briefly the things you should do to ensure longevity of your steam generator.

If your steam use is more than 8-10 hours in a week, you should use automatic calcification preventer at the entry of device.

If your steam use is less than 8-10 hours in a week, depending on the power and use hours of device, you have to use anti-lime scale solvent.

Both for private and commercial use, when your use of steam generator is completed, the hot water in the boiler should be is discharged. This process can be undertaken by manual or by automatic systems. Especially in commercial facilities, the workers in charge mostly forget this process and thus water inside the boiler gets cold and cause calcification. Thus, we recommend you to choose a device involving automatic discharge system. If your existing system does not involve automatic discharge, it can be added afterwards. You can take support from our company on this subject.

SPECIAL PRODUCTS AND ACCESSORIES FOR STEAM ROOMS

Since high temperature and water exist together in steam rooms, all products and accessories should be chosen with considering these two aspects.

Steam Room Lounge Suits: They are manufactured with special patterns of curved lines, ergonomic lumbar support, slope that provides condensed water fall to the ground and paneling characteristics appropriate for glass mosaic construction.

Steam Room Doors: Doors of steam room should be made of aluminum case in order not to be affected from humidity. Existence of sealing gasket is important for protection of heat. Their hinges, magnets and similar components should be stainless. SunCare manufactures its own steam room doors. It easily provides your special brand preferences like Tylö.

Emergency Systems: Emergency button for the steam room in commercial facilities. Cable and cable free models.

Steam Room Ceilings: Mistakes in construction of steam room ceilings, cause condense, condensation of steam on the ceiling. Condensed steam on the ceiling fall on users as cold drops. Thus, the ceiling should be constructed with arched structure and with vaults. Since the ceiling in steam rooms will stay continuously wet, in SunCare steam rooms should be constructed of pvc, aqua, ctp, or acrylic materials. The material of the ceiling is determined according whether the main structure of steam room is of glass mosaic, acrylic or marble and the desired type of illumination.

Steam Room Illumination: The structure that is used in the ceiling of steam rooms, determine the type of illumination. Spots, appliqués, hidden channeled led illumination can be implemented. Whatever type of illumination you choose, all materials have IP55, IP65 or IP67 specifications of international protection standards. With these protection specifications, our illuminations have safety and resistance against steam and water.

Fiber Optical Light Games: By creating a night full of stars effect, you can bring the ceilings of steam rooms an attractive and catchy look. Fiber optic is the small and large sparkling game of lights. It is also used in Turkish bath (hamam) domes.

ESSENCE IMPLEMENTATIONS IN STEAM ROOMS

Enriching the warm and soft atmosphere of steam rooms with aromatic essences, carries the relaxing effect of your sauna to a higher level. You have a couple of options to use these essences in your steam rooms:

Tylö Fresh Basic / CC

Professional type essence device specially designed for steam rooms. It is installed at latest 2 meters away from outside of the steam room. It operates silently and automatically. It has basic model and control unit CC model. CC model product both controls intensity and intervals of the essence.

SunCare Essence Pumps

Suncare also produces special essence pumps for its own essences. Essences pumps are connected to steam line. Amount and duration may be regulated in line with the size of the room. It operates full automatically. It can operate integrated with old and new all steam generators.

Essence Reservoir Nozzles

SunCare steam nozzles have essence reservoirs. Essences that are dropped to reservoir are distributed to room via steam. Its more appropriate for boutique and home use.

ESSENCES FOR STEAM ROOMS

The widest steam room essences are in SunCare from menthol to eucalyptus, from orange to mango...

Essences turn your steam rooms into an attractive and joyful environment with their nice smells.

How is steam room essence is used?

- With essence pipes;

Locate essence bottle to the access part of your essence pipe.

Your essence pipes provide essence to your steam room due to amount and intervals you decide....

- With essence wombed steam nozzle;

Apply a few drops with essence wombed steam nozzle.

Essence will be distributed all around steam room with heat and steam.

Our steam Room Essences			
Eucalyptus	Menthol	Orange Cinemon	Lavender
Lemon	Spruce	Orange vanilla	Green apple
Pine	Rose-Plum	Tropical	Mango

Sheraton Hotel, Ankara

BENEFITS OF STEAM ROOM

Steam rooms are unique spaces for those who do not like high temperatures and want to sweat in softer and tranquil environment.

Steam room is one of the ways of detox and being purified from harmful substances. With the use of steam room, pores on the skin are opened, toxins are removed.

Use of steam room provides a relaxing space for the patients with sinusitis, bronchitis and allergic diseases. Decreases your cough, relaxes your muscles. Your pores are opened, skin is purified from dead cells and turns into smooth and alive look. Accelerates circulation system. Facilitates oxygen access to your cells. It takes away your fatigue and stress. Getting inside steam room after exercise, will help discharging lactic acid that cause pain in muscles.

TURKISH BATH (HAMAM)

“ “

THE RELAXING MAGNIFICENCE
OF MARBLE...

” ”

We put the Hamam, an important aspect of our culture, again in our daily lives. Its every stage, beginning with heating system, its marble, its basin, tiles, its navel stone, dome and doors, all are processed with great attention. Either traditional designs, or modern interpretations...

The healing of marble is at your service with SunCare...

Boutique Hotel, Dağça

TURKISH HAMAM MANUFACTURE

We manufacture Turkish baths (Hamam), one important aspect of our culture, in master hands... Either traditional Ottoman baths (hamam) with many users, or home type baths with modern design... We produce baths in our own facilities which you will consider they are for sultans, which you will notice the relaxing effects even at the first moment you see them.

A good Hamam should be constructed of hard and pore free marble... Its jointing should be at minimum level in order to ensure hygiene... Water channels of the bath should be designed in order to water directly reach to discharge point. Marbles should be located so that they will not disturb the look with their veins and tissues.

Any structure made of marble can not be considered as Hamam just by adding a basin in it.

What makes a bath as a real Hamam is the heat. The marble should be excellently heated for a space to be considered as Hamam. Benches, back supports, and all parts where the users contact should be heated in line with the purpose. Especially the navel stone should be heated more than all other points in order to make the users sweat when they lie on it.

Settlement of basins, distances among basins, height of faucets from basin, planning of illumination, details of ceiling, dome, ventilation and water isolation...

Briefly the bath is not a single marble implementations but a special manufacture that require proficiency and experience.

All technical and visual aspects, are individually considered and designed for hamam projects by SunCare.

HOTEL AND SOCIAL FACILITY HAMAM

Inspiring Hamam for many users, with high ceilings, domes, columns, navel stones, detailed illuminations are at your facilities and hotels with SunCare... Send your project to us and let us make your dreams come true in master hands. Our biggest references are the works we have already undertaken...

Keep in mind, hamam are constructed for once... A Turkish bath with right materials and correct craftsmanship would be the best service for your customers.

HOME TYPE HAMAM

Hamam do not require large spaces. You can turn a small room in your house or parents bath easily into a hamam. Even you can turn a part of your bath into Hamam. Besides, even at small size, you can have the full pleasure of a hamam from the heating system to basin, Ottoman faucets to traditional tiling.

Hamam, the aspects of resting, relaxing and pleasure of our culture, reach to your homes with SunCare. We are at your service for our special, mini hamam solutions for your homes.

HAMAM HEATING SYSTEMS

All marbles in hamam which will directly contact the users should be totally heated. Benches, floor, back support and navel stones should be heated to different temperatures.

Heating system in hamam is extremely important since it is located under the marble. Since return would be significantly important, project should be properly prepared and pre-tests should be undertaken.

Hamam are heated basically with 2 different principles:

☛ Heating with hot water

In the heating of large sized Hamam as in hotels and facilities, hot water is preferred. Its more economic and high temperatures can be easily provided. Heating pipes that are places on special heat isolation plague are transmitted to each points of hamam. Thus, heat isolation and heating of all hamam space is ensured.

☛ Electricity Heating

We recommend you electricity heating for the facilities that are unable to provide hot water continuously and home type small spaces. Electricity heating systems are commended through special control panels. In digital models, days and hours are determined and you can program on which days and which hours of the week you prefer to heat the hamam. With this opportunity, you never wait your bath to get heated. Your hamam will be hot and at your service whenever you want...

WARMNESS

Traditional hamams are composed of three sections. The space called heat is the bath itself. The part called Camekan where people are undressed, is considered as the access of hamam. Warmness is the part between cold undressing part and hot part where your body is being prepared for hamam. After getting out of hamam, it is used for same purpose not to get in the cold environment suddenly but to warm your body. In large historical hamams, warmness is large. There are warmed marble benches. Toilets and the part called gizzard exist in warmness. Even in some of hamams, there are some washing glove rooms and washing rooms with basins who do not prefer hot environments. Warmness turns into a physical and mental relaxing area with a pool and fountain made of marble.

DOORS OF HAMAM

Like all other components of hamam, doors also require special craftsmanship. Hamam doors may also be in different designs like the baths. They can be preferred in accordance with the architecture of the space as well as a visual to independently complete hamam. There are numerous alternatives such as traditional doors with the patterns of Ottoman and Seljuk periods, doors with mallets of which own weight compose a natural bow system or Seljuk künde-kari wooden doors.

In case all doors in a space for sauna, steam room and similar are made of glass, door of hamam may also be composed of glass in order to obtain visual integrity.

TILES

The main material that turns baths into traditional hamams are the tiles. All tiles, all designs, all colors are visual festivals to carry you into the journey of history. The tiles can be applied behind the basins or completely on walls or around the hamam as strips.

P 621

P 622

P 624

P 625

P 62

PANELS

If you want to make a hamam special, you have to use panels. Panels can be made of hand made special design tiles or master of arts made of marble.

HAMAM CEILINGS AND DOMES

Hamams are completed with ceilings of different kinds due to their styles and purpose of use. Domes are necessary for large baths with high ceilings. For thin and long type hamams, ecliptical domes may be used. In home type small hamams, more plain and light pooled ceilings are applied.

Since hamams are spaces that involve high amounts of humidity, the ceilings should be made of special materials. In case the materials are not appropriate for ceiling manufacture, there may be defaults or even collapses in the ceiling. SunCare only manufactures ceilings with materials that are used in wet environments such as Aqua, CTP or acrylic.

VINTAGE LIGHTINGS FOR HAMMAMS

Hamam relax our souls and bodies with water and hot water but with the style of illumination. The effects of soft lights are much more stronger in comparison with much illuminated hamams. SunCare presents several product options at this point. Traditional Ottoman style glass illuminations, modern styled dominated illuminations, hidden led illumination, fiber optical illuminations that may present night and stars vision inside the dome...One of either traditional or modern illumination is exactly for you...

SALT ROOM

“

TAKE A DEEP BREATH AND
RELAX.

”

Salt is an important for humanity. It is not only used for nutrition but is a material that refreshes and repairs the body. We carry the healing effects of salt mimes that are known globally to your centres for a healthy life.

SALT ROOM MANUFACTURE

Salt room is a system that has been developed in order to transfer the healing effects of salt mines to alternative healing clinics and even to homes. The main specification of salt is water retention. The main aspect of this is to add the micro particulars of salt into the air. Breathing this salt in forms of micro particulars will naturally clean respiratory system. Salt, which is a microbial material, naturally cleans the respiratory ways. Thus, you can breath easily, may take more oxygen when you take the same amount of air.

Provides a deep relief in patients with asthma, shortness of breath, KOAH and sinusitis. Again, related with respiratory system, it is a method that significantly contributes to the treatment of sleep disorders, sleep apnoea, waking up tired all deriving from not breathing properly.

Salt therapy is a process that was initiated by Dr. Felix Boczkowski in 1843 after he had noticed that the workers in the salt mines of Wieliczka city of Poland had not faced with any respiratory diseases and examining the issue scientifically and reporting his findings. Following this event, inside this mine in Poland, the first salt therapy center in world had been opened. In the following years, similar therapy centres had been opened throughout the world in salt mines and caves. Among these countries, we can mention Austria, Romania, Kyrgyzstan, Russia, Ukraine, Slovakia, Belarus, Pakistan and Nakhcevan. Duzdağ Cave in Nakhcevan has been serving as a hospital for diseases of respiratory system such as asthma and shortness of breath since 1980.

Since anyone on earth who needs such kind of treatment may not have access to those limited number of facilities, studies have been undertaken to provide the similar effects of micro climatic environment of salt mines. These healing effects are tried to be obtained with salt rooms and salt saunas with micro climatic effects in Spa centers, healthy life clubs and alternative treatment centers.

SunCare manufactures three different types of salt rooms; one with particular salts which is called drawing technique, or Himalayan salt bricks which have better visual effects, or concepts designed as caves.

No matter how decorative you make it, paneling a room with salt does not make such room a salt room. In order salt rooms to be beneficial, there has to be salt generator that spreads salt particulars. A room without salt generator is useless.

The relaxing effect of salt caves that open your breath is now beside you with the salt rooms of SunCare!

SALT GENERATORS

Salt generators are devices that allow salt particulars to spread into the room. Thanks to salt generators, users may experience relaxing and healing effects of salt mines. Thus, rooms without salt generators may not be accepted as salt rooms.

This system may be dry spray, liquid spray or ionization according to the space and type of device.

In dry system, device in which salt is put in, minimizes the salt to an amount that can be served as dry spray. Salt, which is minimized to such small amounts, spreads into the room. In liquid spraying, the salt inside the water is spread inside the room via liquid spray.

Ionization system is the system which continuously spreads low amounts of salt.

It is used together with salt bricks. It can also easily be used in salt therapy walls in the houses and business places, not just only in salt rooms. The same system is being used in home type salt therapy panels. It operates silently. You do not notice the fan or spray. Patent rights of ionization system only belong to SunCare Spa Implementations.

BENEFITS OF SALT ROOM

In the environment where SunCare Salt Therapy system operates, it ionizes natural rock salt as micro particulars and form the micro climatic effect of salt caves. Thus, you have the opportunity to experience the beneficial effects of salt mines in all environments you are in.

Diseases, which salt therapy in salt mines contribute to their treatment are:

- ☺ Asthma
- ☺ Allergic Asthma
- ☺ Asthma, Bronchitis
- ☺ Shortness of Breath
- ☺ Sinusitis
- ☺ Chronic Cough
- ☺ Nose Stuffiness
- ☺ Snoring Related with Respiratory System
- ☺ Post Nazal Drainage
- ☺ Sleeping disorders
- ☺ Waking Exhausted

Furthermore, data obtained from the clinical researches undertaken on salt therapy, in the body analyzes of individuals who took salt therapy, the amount of carbon di oxide decreases while the amount of oxygen increases. Depending on the increasing amount of oxygen, a significant increase has been observed in quality of life.

This study shows us that;

- Smokers,
- People who work in dusty environments such as construction business or timber manufacture,
- People who work in environments which have negative effects on respiratory system such as mines, industry or chemical business,
- Those who spend so much time in traffic in metropolitans,
- Those who live in cities with air pollution.

Will have serious benefits while taking salt therapy. Those who do not have any respiratory diseases but take salt therapy, are reported to have benefits like increasing sleeping quality and they declared they woke up alive and fresh in the mornings. Salt is also a natural antiseptic. This means, it is an antimicrobial material. From the early ages of history, salting is applied to meat and similar foods to keep them fresh. Since it ionizes salt to the environment, salt therapy has antibacterial effects and decreases the efficiency level of the microbes.

We can mention more technical and scientific data on salt therapy as follows:

Medical articles published on salt therapy:

- 1- In the study undertaken on 49 patients with bronchitis, it is determined that, salt therapy arranges the distribution of free oxygen radicals, increases local immunity and accelerates the clinical course.
- 2- It is determined that, in chronic bronchitis patients, salt therapy applied supplementary to medical treatment has positive effects on patients.
- 3- In the study executed on 124 patients with different respiratory diseases, the clinical situations of those who took salt therapy were positively observed, a decrease was determined in bronchial resistance.
- 4- The results of the study on 393 asthma and chronic obstructive lung disease patients showed that, a significant change of values were observed on paraclinical parameters (respiration frequency, oxygen saturation and partial pressure on blood gases).

- 5- In the study executed with 32 asthma patients, salt therapy applied with treatment, decreased excessive bronchial sensitivity.
- 6- In the study undertaken with 29 patients of chronic bronchitis and asthma disease, remarkable positive results have been determined on air flow parameters of the lungs and on blood pressure after salt therapy.

- 1- Effectiveness of halotherapy of chronic bronchitis patients, *Voprosy Kurortologii, Fizioterapii, I Lechebnoi Kultury*, 2000/6:21-24
- 2- Effects of halotherapy on free radical oxidation in patients with chronic bronchitis, *Klinische Kaia Meditsina*, 2000, 78(12):37-40
- 3- Halotherapy for treatment of respiratory diseases, *Journal of Aerosol Medicine*, 1995(8),3:221-232
- 4- SaltMed, *Therapeutics, Pharmacology and Clinical Toxicology*, 2010/3:201-204
- 5- The effect of salt chamber treatment on bronchial hyperresponsiveness in asthmatics, *Allergy*, 2006/61:605-610
- 6- The use of artificial microclimate chamber in the treatment of patients with chronic obstructive lung diseases, *Voprosy Kurortologii, Fizioterapii, I Lechebnoi Kultury*, 1997/4:19-21

All age groups, from babies to old ones .may comfortably use salt therapy. Salt therapy is not a medicine. If any, it does not interact with the medicine you use. But, there are still some conditions where salt therapy is not advised:

- Patients with high blood pressure.
- Patients with coronary failure
- Those with urinary calculus and gail stones
- Those who are under cancer treatment
- Tuberculosis patients

Warning: SunCare Salt Therapy is not a device or treatment that directly treat your health problems. Salt therapy is a system designed to increase the life quality of people with the patients with above mentioned diseases. For all your health problems, please first refer to your physician.

SPECIAL SPA APPLICATIONS

“ “

FOR THOSE WITH
HIGH EXPECTATIONS...

” ”

You have several alternatives beyond the standard services of sauna, steam room or Turkish bath. Supplementary spa applications such as snow fountains, adventure shower, shock showers, mud baths, heated benches and massage units are at your service with SunCare...

SPECIAL SPA
APPLICATIONS

SHOCK SHOWER BUCKET

A whole new type of shower in order to meet the shocking need after getting out of hot spaces like sauna, steam room.... Cold water falling from the head of user with single move...

It has 15 liters of water capacity. Its reservoir is automatic. It automatically fills the water and when it is full, it is ready to use again. The height should be at least 240 cm for use.

Its more economic and hygienic in comparison with shock pools.

With shower bucket, bring fun and little entertainment to your spa areas.

“
A COMPLETELY NEW SHOWER
EXPERIENCE...
”

ADVENTURE SHOWER

Adventure showers will take you new destinations...

Shower options with different rain types, essences from the heart of nature, visual light effects, thunders and tropical effects and other surprise characteristics.... Will stimulate all your senses. You will feel a different kind of relief you have never experienced before.

A system that has to be in all Spa center and sports club projects...

4 programmed adventure shower operation sample:

Program 1: After starting the program, hot odored tropical rain environment is constituted for user. Simultaneously with the start of the rain, it is integrated with sounds of ocean and red light.

Program 2: Hot tropical rain is replaced with a cold rain shower and mist rain. The type of the rain is dependent on the sprinkler used. The light environment in the cabin is in a soft transition from red to blue in line with water sound effect.

Program 3: Hot and fruit essence tropical rain is started to be sprinkled through side nozzles. User gets relaxed in a hot environment which begins with thunder and hurricane light animation and continues with thunder sound effects.

Program 4: It makes massage over the side nozzles. Cabin light environment turns from blue to red with the sounds of waves and seagulls. In the last stage of the program, hot massage is delivered from side nozzles while chilling rain from mist nozzles. The light of the cabin softly turns from blue to green and green to red with the singing voices of the birds.

A note to Remember: You need a technical space for the machine control unit of adventure showers.

HEATED LOUNGERS

They are the most preferred products in the resting areas of Spa centers. It is used for relaxing your body following hot-cold implementations. They cover your body with their special ergonomic designs.

It regulates blood circulation. They have relaxing effect on nerve system. Strengthens immune system. Helps dissolving of cramps in muscles. Helps your body to turn to normal after hot and cold therapies.

- Can be constructed of glass mosaic/marble.
- Colors and patterns can be chosen.
- It includes electricity heating system.
- It has control panel.
- Its sizes are: 70 × 205 × 86 cm
- Can be manufactured in special sizes.

ICE FOUNTAINS

Another method used for chilling your body after hot implementations like sauna or steam room. It has softer chilling effect in comparison with shock shower or shock pool. Snow, taken from the snow mountain are put on arms and legs of the body with circular movements. It refreshes your skin, accelerates blood circulation and strengthens immune system.

It can be manufactured in different designs by using materials such as marble, glass mosaic, wood or chrome.

Snow fountains operate with system with photo cells. When the level of snow reaches to a certain level, the system gets into holding position. As the amount of snow in the bowl is used, the device starts to work again and produces snow. It is an economic spa application which does not require maintenance.

SNOW ROOM

Snow room is a cold therapy room that has high level of heat isolation with the help of special equipments. It is used to regulate blood circulation after getting out of hot spaces like sauna and steam room. But, while the snow fountain allows implementation manually, the snow room gives the opportunity to implement snow to all body. In the entry part, you need space for special technical room for pre warming and location of devices. It can be built plain and modern as well as in impressive designs such as caves.

RASSOUL BATH

An old Arabic tradition rassoul is known as mud bath. It is composed of combination of steam bath and mud. A special mixture of mud is applied to body. With the help of heat from benches, the mud is being dried on the body.

With steam generator operating, the mud is rewetted. Wetting mud absorbs the dirt in the skin.

Rassoul ritual ends with shower.

Rassoul, mentioned among natural therapies is used as a precaution against several diseases.

It stimulates immune and circulation systems, relaxes and strengthens the body.

Mud baths especially support dry, damaged or sensitive skins.

It is a type of bath for acnes, pores and egzama.

MASSAGE BEDS

MASSAGE OILS

Our massage oils produces for Spa centers, are totally organic. Tens of massage oils from jasmine to lavender, from coconut to mango and to vanilla, are at your service.

SunCare Massage Oils			
Wind of Anatolia	Egzotic	Classical massage oil	Pomegranate
Honey&Orange	Rose	Kiwi	Daisy
Honey	Coconut	Lavender	Orange
Balance&Beauty	Linden	Lemon	Peach
Flower Garden	Fig	Mango	Cinnamon
Strawberry	Cacao	Wind of Bosporus	Vanilla
Wind of Sea	Watermelon	Violet	Jasmine

SPA LOUNGERS

SunCare resting beds give you the opportunity of a unique experience with their ergonomic designs and comfort at Spa centers in warmness, resting and pool areas.

- Wooden structure enduring to water, humidity and steam
- Ergonomic design for your body...
- Special paneling designed for intense use...

SUN LOUNGERS

Wooden loungers appropriate to be used in pool, beaches or home type use

- Teak, Iroko and alder options...
- Wheeled models,
- Back adjustable models,
- Models with service tables,
- Economic plastic models.

POOL

CHARMING PHASE OF WATER

Water is the source of life in its every form. We present you several options for swimming pools, decorative pools, hydro massage Jacuzzi pools that provide physical and mental health and relief.

In manufacture and maintenance services, quality meets with experience of SunCare.

POOL

0312 397 03 03

CERAMIC POOL MANUFACTURE

Inner space closed pools or open pools for outer areas... We use SeraPool brand of pool ceramics made of %100 porcelain that are used in 70 countries for all climate conditions. Professional ceramic pools are overflow type and completed with flowing channel and balance tank. For smaller spaces/small pools with special use, skimmed system can be preferred. System with skimmer does not require additional components like flowing channel and balance tank.

For the pools, of which concrete have constructed with C25 or C30 and basic structure have been completed, plaster and screed processes are undertaken. Now, it is the phase of ceramic implementation. The most important aspect of ceramic pools is the complete implementation of water isolation. At this stage, we apply water isolation with double components prior to ceramic tiling. We use supportive materials with flex characteristics in ceramic adhesives and joints.

Finally, walking terrace (sunbathing area) is constructed around the pool. At this stage, skidproof materials should be preferred. These materials may be chosen among antislip ceramic, natural stones or wooden decks.

OVERFLOW SWIMMING POOL

SKIMMER SYSTEM SWIMMING POOL

LINER POOL MANUFACTURE

The best way to construct pools in short time and low costs is liner pools. Material called Liner is composed of pure PVC raw material. It has wide range of color and pattern alternatives. Along with ceramic, mosaic and kerb color options, it also has single color and pattern models. Its thickness is 1,5 mm. It is in competence with concrete or steel structures. Since it is a very flexible material, it is not affected by deformations deriving from surface movements. It is not thorn unless cut by purpose. In case of tearing, it can easily be repaired even when the pool is full.

It is especially preferred for the ones wo do not want joints.

Due to the characteristics of the material, it does not get mossed.

On the liner paneled swimming pools, only filtration application called skimmer is realized.

Liner can be implemented on ferro concrete blocs as well as steel panels for those who do not prefer to deal with concrete moulds. Construction with panel accelerates the process. It is more economic. After completing main concrete or panel structure, 4 mm of mat is lied on the ground. Than liner pool is lied inside the pool. The pool is being hung with liner rails which has installed due to the shape on the upper part of liner pool surrounding. The air between liner and min structure is being vacuumed. Following vacuum, the pool is filled with 15-20 cm of water. At this stage, equipment places are opened on the pool. Installation of the equipments are completed. The pool is completely filled with water. Necessary processes are undertaken for the first water and training on pool maintenance is delivered. The pool is delivered to the user.

MASSAGE POOL/JACUZZI MANUFACTURE

They are pools constructed with hydro massage purposes. Composed of porcelain ceramic or glass mosaic. The water isolation in the pools is applied to Jacuzzis as well. Jacuzzis may be applied as part of a large pool as well as being constructed as separate pools. The main components of massage pools are hydro massage units, blowers (air massages), heating system and filtration systems. There may be additional components such as shoulder massage/air bed.

DECORATIVE POOLS WATER CURTAINS

Decorative pools are constructed of porcelain ceramics or glass mosaics along with ferro concrete. Their projects are designed and manufactured according to the geometrical shape, water games and illumination systems required.

You can also contact us for different kinds of pools with artificial waterfalls, water curtains and different characteristic of visual feasts.

POOL EQUIPMENTS

POOL PUMPS

Units that continuously take the water inside the pool to the filtration system are pool circulation pipes. Pump/pumps to be bought for pools are determined according to the volume and use of purpose of the pools.

POOL FILTRATION

Water of pool is polluted depending on outer impacts. Users leave hair, dandruff, textile pieces, cosmetics to the pool. Outer factors are dust, soil and other materials to pollute the pool. Polluted water is absorbed via water air circulation pump and directly sent to the filters. Water is purified of harmful particles via quartz sand/glass particulars inside the filters.

Pool chemicals are applied for cleaning micro organisms to the water passed through the filters. The water is re sent to pool after being cleaned. This process is called as filtration system.

POOL DISINFECTION SYSTEMS

Filtration system distills particulars. Chemical pool chemicals are applied in order to clean micro organisms such as virus, bacterial, spores and mosses. These chemicals are applied due to the volume and usage frequency of the pool.

They can be applied either manually or with automatic systems that regulate measurement and doses.

Chlorine, pH pelletizers and algaecides can be interpreted as pool chemicals.

Furthermore, in order to decrease the use of chemicals and increase hygiene, ozone generators and UV disinfection systems may be used.

POOL HEATING SYSTEMS

In order to warm up the water of the pool, plate heat exchanger, heater with electricity or heating pipe may be used.

DEHUMIDIFICATION SYSTEMS

Humidity in closed pools is very high due to the warming up of the closed pools. To maintain the humidity at certain level, dehumidification devices are being used. Device is chosen according to the volume of closed pool environment.

POOL ROBOTS

Ground cleaning should be undertaken for the particulates that accumulate on the ground in time. Since it is hard to undertake this process manually, automatic pool robots are used. Full automatic pool robots undertake the ground (and sometimes in some models walls) cleaning with a special software, they clean the surface of the pool automatically.

Along with home type small and economic models, there are also models with professional remote control and digital control panel.

WATER GAMES

You may add action and activity to your pools with water curtains, water falls, mushrooms, ground air nozzles, air beds. With hydro massage units, you are able to provide an excellent jacuzzi effect in some parts of your pool.

JET STREAM-REVERSE FLOW

You have the advantage to swim in a small pool as if you are swimming in an endless sea. Jet stream is a reverse flow system that allows the continuous swimming inside the pool. When it is desired to be functioned, you push the pneumatic button inside the pool to operate. Capacity of reverse flow can be regulated.

DISABLED POOL ELEVATOR

It can be used in all pools of pools in hotels, thermal facilities, pools of private use and even at beaches. It can be used by disabled individuals and those who have limited capability of movement. There are two types of product options like stable and mobile.

Stable disabled pool elevator is made of stainless steel. There is no need for accompany. There is no need for electricity line. It operates with the pressure of network water. It is more economic in comparison with acquisition and execution models. Mobile disabled pool elevator is used with a companion.

It is battery powered. User may be taken from the dressing room to the pool.

POOL CLOSING SYSTEMS

If you want to use your pool in all weather conditions in every season, we recommend you pool closing systems.

Swelling Pool Closing; a PVC covering called “dome” is lied on the pool. It is stabled around the pool by anchors. Dome, swelled by the device called blower, turns your pool completely into a closed one. It is a material that have resistance to winds over 100 km/hour and load of snow. Upon request, the material can be taken out in half an hour.

Telescopic pool closing systems are much more professional implementations. With the integrating units composed of parts, you can turn your pool into a closed one any time you want or easily open it in a few minutes. They are very chic and useful products.

Whatever type of pool it is, pool closing systems will provide you safety and convenience in many aspects. Gives you the opportunity to use pools in 12 months of the year in places with hard climate where the weather only allows 3 months of use. It prevents entering of undesired substances like dust, soil and keeps the pool in a condition to use every time. Provides serious economy in terms of heating. Decrease of pollutants facilitates less usage of chemicals and this also causes decrease in maintenance costs.

POOL SHEETS

Pool sheets can be grouped in 2 different shapes as daily and for winter. Daily sheets help decreasing of environmental impacts when the pool is not used, decrease the evaporation amount of water in the pool. It decreases the increasing of humidity in closed pool environment. Also provides heat protection. There are economic models which can be manually gathered on drum as well as high class products which operate automatically. Winter sheets are used for the safety of the pools which will not be used for a long time, especially at the end of seasons. It hinders animals and human to fall inside the pools and be drown. Again, pool sheets hinders effects of outer pollutants.

POOL CHEMICALS

We can summarize the possible chemicals you need for the maintenance of your pool as chlorine (liquid, powder, tablets) pH depressor, algicides, precipitators, feet disinfection chemical, ceramic surface cleaning chemical, winter maintenance drugs. Table of information for the problems that may derive in water of the pool and the use of chemicals;

Problem	Reason	Effect	Solution
Water with dull look	Chlorine level is low stabilizer high (>100ppm)	First stage of moss production	Regulate pH and make shock chlorination. Make long period of reverse washing and fill the pool with amount of fresh water more than usual.
Water is not bright	Filtration low pH is high.	Materials that are not dissolved.	Check filter, decrease pH.
Colored but brilliant water	Metal ions exist	Oxidized metals	After precipitation process, make deep cleaning with vacuum sweeper. Reverse washing and fresh water addition
There are colored particulars	Corrosion with low pH and low SI	Oxidized metals	Increase pH
Formation of stones on walls, pipes and filters	pH is high alkalinity is high	Calcium carbonate resolution is overcome.	Decrease pH. Continuously regulate pH with H depressor.
Green dull water, sloppy	Chlorine level low more stabilizer	Moss production	Clean dead mosses with vacuum sweeper. Add fresh water after long reverse washing.
Irritation of eyes and skin	pH is not appropriate, chlorine is ineffective, old auto test solution	pH is other than suggested amount, high amount of chlorine	Make shock chlorine. Decrease chlorine, make measurement with DPD
Strong chlorine odor to irritate the eyes	Low amount of chlorine high stabilizer (>100 ppm)	Dependent chlorine high (>0.2ppm)	Make free chlorine 0.6 - 2.0 ppm. Make shock chlorine correctly. Check pH, add water after long reverse washing
Decoloration in hair, clothes and vinyl coverings	Miscalculating of free chlorine old auto solution	Very high chlorine amount (>15ppm)	Decrease chlorine amount

CLEANING AND MAINTENANCE

In order to have healthy pool, the most important issue is the correct maintenance of water of the pool. The water of the pool has to be hygienic, it has to be measured with certain intervals and these values should be kept within the defined limitations. Although it is not very difficult, you have to keep in mind that keeping such values within the limitations is not an easy process. Thus, training on maintenance of the pool should be taken, or the process has to be undertaken by professionals. Open pools are the pools that require the maintenance most. Soil, dirt, hair, moss seeds and micro organisms that are carried through environmental impacts pollute the pool in very short time.

In the public pools, sweat, dandruff, skin, mucus, saliva, urine and also cosmetics, sun oils, soap and shampoo of the users and other chemicals of the users are left inside the pool. Large particulars such as hair and dandruff are eliminated by filtering, skin, mucus, saliva, cosmetics and soap leftovers that muddy the water are eliminated by precipitation and filtration, micro organisms like urine, sweat are eliminated by disinfection.

POOL WINTER MAINTENANCE

Pools of which winter maintenance is undertaken properly, will save you time and money during opening of the season.

First of all, the pool has to be kept full in winter. Thus, surface of the pool and its structure will be more protective against outer impacts. For the pools with the risk of freezing in the winter, professional assistance should be taken.

Ice pressure support should be placed against the ice layer on the pool. Number of ice supports are determined in competence with the size of the pool and their settlements are designed due to these measures.

Furthermore, winter chemicals should be implemented for the protection of water in pool during winter.

After taking necessary precautions, the pool is covered with winter sheet.

MY POOL LEAKS OUT WATER

You can bring solutions to water leaking solutions in ceramic pools which are not constructed properly, are cracked due to quality of concrete with liner covering method.

WOOD DECK PANELING AROUND THE POOL

Without a doubt, the most appropriate material to be applied around the pool is wood. None of any other materials can give you the comfort of bare foot touching the soft timber.

SunCare, only uses thermowood heat treated timbers in pool walking terraces. Timbers, which are not processed heat treatment, may not endure to the changes of humidity and temperature. Due to the conditions of the environment, after a while, flexion, bending, narrowing and enlargement are observed in the timbers. But thermowood teated timbers are heated up to 210° C and their protection have been carried to the highest level. None of the chemicals are used during this heating process. The process is totally undertaken with high temperature and steam. The water resistance, humidity balance, resistance to corruption of these woods are taken to the highest level with thermowood heating.

Deck oil applied in pre manufacture period is applied for the second time after on-site installation. Thus, timbers have the resistance to be used in wet environment for a long period of time.

Wooden deck implementations may not also applied around the pool but also around Jacuzzi, garden walking areas, balconies, winter gardens and even on the grounds of showers.

SUNCARE WORKSHOP

“ “

IMPRESSIVE, SPECIAL
IMPLEMENTATIONS OF
MASTER HANDS...

” ”

Our crew has been processing the precious construction materials of the world and marble for SPA applications and manufactures you very special places... The experience we have gained through processing timber and marble, we are at your service especially in implementations that require proficiency.

TIMBER DECK APPLICATIONS

Wooden ground... Hot. Natural. Comfortable.

You can never experience the comfort and pleasure of bare foot touching on a timber ground.

Wooden deck implementations may not also applied around the pool but also around Jacuzzi, garden walking areas, balconies, winter gardens and even on the grounds of showers.

We are very selective at this point. We present you the best of timbers.

We are working with the best of thermowood heated timbers that will be subject to temperature changes, will face sun n summer, rain in spring, snow in winter, will carry a heavy human traffic, will be exposed to soap and shampoo.

THERMOWOOD

Pine. Limba. Ash Tree. Spruce. Iroco.

Canadian Cedar timbers that have been through thermowood heating are;

- More resistant to corrosion.
- More resistant to all kinds of weather conditions.
- Raciness are taken out.
- High resistant to cracking and revolving.

Thermowood is a special heating process. But thermowood treated timbers are heated up to 210° C. None of the chemicals are used during thermowood heating process. The process is totally undertaken with high temperature and steam. This method can be implemented on several timbers but in the market, it is generally implemented on Swedish pine, limba, iroco, ash tree and Canadian cedar. The water resistance, humidity balance, resistance to corruption of these woods are taken to the highest level with thermowood heating. Deck oil applied in pre manufacture period is applied for the second time after on-site installation. Thus, timbers have the resistance to be used in wet environment for a long period of time.

Area of Use:

- Pool Surrounding
- Shower Grounds
- Timber Outer Space Panelings
- All Outer Space Implementations
- Wet Ground Implementations

Bilim Ağacı Mansions, Alacaatlı

WOODEN STAIRS

Our wooden manufacture crew has experience over 10 years of manufacturing.
Our crew is at your service for all types of stair manufacture.

Bilim Ağacı Mansions, Alacaatlı

FIRE PLACE

Fire place manufacture requires good stone craftsmanship.

SunCare, uses its experiences on stone craftsmanship by making excellent fire places.

SPECIAL MARBLE IMPLEMENTATIONS

SALT THERAPY PLANS

SunCare Salt Therapy Panel; is designed to carry the healing effects of salt mines and salt caves to your homes/offices.

Relaxing effects of breathing of salt mines is beside you!

You will notice the positive effects of SunCare salt therapy panel from the first day of use.

How does SunCare Salt Therapy

Panel Operate?

SunCare Salt Therapy Panel, with its patented special method, ionizes the salt and distributes it as micro particulars. The salt we use is directly purchased as the purest and most natural way as it was taken from the salt mines. In brief, in SunCare Salt Therapy Panel, natural salt is used without any chemical additives. SunCare Salt Therapy Panel is designed to be held on the wall like a painting. Does not require any space. It is easily used in all living spaces beginning with homes and offices. In the main structure of the panel, timber is used. The material used is totally natural. Does not have any negative effects like smell and humidity. Operates with electricity. Consumes electricity as an energy saving bulb. After the system has been opened, it ionizes the natural rock salt and distributes it to the room. Provides micro climatic effects of salt caves in the environment it works.

• Where is Salt Therapy Panel Used?

- Homes
- Offices
- Dat cares and Student Dormitories
- Hotel Rooms
- Guest Houses
- Waiting Lounges

Furthermore, data obtained from the clinical researches undertaken on salt therapy, in the body analyzes of individuals who took salt therapy, the amount of carbon di oxide decreases while the amount of oxygen increases. Depending on the increasing amount of oxygen, a significant increase has been observed in quality of life.

For further information page:87

This study proves us that;

Smokers, those who work in intense dusty environments, People who work in environments which have negative effects on respiratory system such as mines, industry or chemical business, Those who spend so much time in traffic in metropolitans

will increase their living quality in case they take salt therapy.

Those who do not have any respiratory diseases but take salt therapy, are reported to have benefits like increasing sleeping quality and they declared they woke up alive and fresh in the mornings.

Diseases, which salt therapy in salt mines contribute to their treatment are:

- ☺ Asthma
- ☺ Allergic Asthma
- ☺ Asthma, Bronchitis,
- ☺ Shortness of Breath
- ☺ Sinusitis
- ☺ Snoring Related with Respiratory System,
- ☺ Post Nazal Drainage
- ☺ Nose Stuffiness
- ☺ Post Nazal Drainage
- ☺ Sleeping disorders
- ☺ Waking Exhausted

Salt is also a natural antiseptic. This means, it is an antimicrobial material. From the early ages of history, salting is applied to meat and similar foods to keep them fresh. Since it ionizes salt to the environment, salt therapy has antibacterial effects and decreases the efficiency level of the microbes. With this characteristics, its using in day cares, student dormitories. Waiting lounges and similar crowded spaces, makes these spaces healthier:
